PROFILE

Emerging technologist and third-year B.Tech Computer Science Engineering (AI & ML) student at SRM Institute of Science and Technology, Chennai. Comfortable working across different technology stacks and quick to pick up new technologies, with experience building Python-based automation and data-driven tools.

Interned at Deloitte for two months, building Pulse, a regulatory intelligence tool that monitors nine financial regulators daily, identifies relevant updates, and converts them into manager-ready reports. Built and tested the pipeline end-to-end, with documentation and automation for reliable daily execution.

Also build computer-vision projects at hackathons, including a 3rd-place finish at SRM Hackathon 10.0, and serve as Secretary of a 500+ member Google Cloud developer community on campus. Looking to grow through challenging opportunities, contribute effectively to teams, and develop into a valuable technology professional.

EDUCATION

B.Tech, Computer Science and Engineering (AI & ML)	2024 – 2028
<i>SRM Institute of Science and Technology, Kattankulathur, Chennai</i>	
Senior Secondary (CBSE)	2024
Secondary (CBSE)	2022

INTERNSHIP

Intern Deloitte Touche Tohmatsu India LLP	Jun 2026 – Aug 2026
<i>Strategy, Risk & Transactions — Regulatory & Financial Risk · Delhi (Hybrid)</i>	
- Built Pulse, an end-to-end Python pipeline that collects previous-calendar-day (D-1) public updates from nine regulators and writes a manager-ready Excel pack (dashboard, detailed rows, and source links for review). - Covered SEBI, MAS, SFC, HKMA, ASIC, FCA, FINRA, SEC, and CFTC: listing collection, document parsing, entity/amount extraction, local-currency to USD conversion, and quality checks so a quiet day (zero rows) is a valid outcome, not a failed run. - Shipped regression tests, a pack quality gate, runbook, and sample deliverable so the workflow can be re-run daily after handover. Owned the project solo under a reporting manager.	

SKILLS

Languages: Python, SQL

Automation & Data Extraction: Selenium, BeautifulSoup, PDF parsing (PyPDF2/pdfplumber), Regex-based extraction, openpyxl, smtplib

Data & Delivery: Pandas, NumPy, MySQL, Flask, Microsoft Excel, PowerPoint

Computer Vision & ML: OpenCV, YOLOv5/v8 (PyTorch)

Spoken: English, Hindi, Bhojpuri

LEADERSHIP

Core Organising Team Secretary	Aug 2026 – Present
<i>Qwiklabs Developers Club (Google Cloud affiliated), SRM IST · 500+ member campus community</i>	
- Appointed Secretary in August 2026 for a Google Cloud-affiliated developer community of 500+ members. - As part of the core organising team, ran HackRush, QwikDev Start, and Qwik Innovate — flagship events with 800+ participants. - Closed event sponsorships with Hack2Skill and Dot XYZ.	

PROJECTS

Visual Crime Analysis Prototype · SRM Hackathon 10.0 · Team of 4	2026
3rd place among competing teams. Owned research and solution design for a computer-vision prototype using OpenCV and YOLOv5/v8 (PyTorch) to detect and flag suspicious objects and activity in video feeds in near real time. - Result led to a paid internship offer from Student Forged Technologies (declined — already committed to Deloitte).	
Stock Market Simulator · Team of 4	
- Built a Python-based virtual trading simulator with randomized real-time-style price movement and matplotlib-plotted price trend charts. - Let users place buy/sell orders in virtual currency, hold a portfolio across multiple stocks, and track portfolio value as prices moved — a full practice loop without real financial risk.	
Bus Booking System & Movie Recommender · DBMS Coursework · Pair Project	
- Designed and implemented the relational schema and complete SQL query set — from schema creation through CRUD operations — for a bus ticket booking workflow, covering routes, seats, and bookings. - Paired this with a movie recommendation mini-project as a second coursework deliverable, built with one partner.	
Think for Bharat · National Ideathon · Top 10 / ~2,000 teams	
Pitched a dashboard and slide deck proposing how historical government data could be used to estimate how public investment translates into on-ground impact — an ideation and design deliverable, not a production system.	

ACHIEVEMENTS

- 3rd Place, SRM Hackathon 10.0 (2026).
- Second Runner-Up, CodePVP competitive coding contest (2026).
- Participant, IEEE Ideathon 2.0 (2024) — participation certificate.
